Seeking a 6-month end-of-studies internship from January 2027 · Open to relocation

Profile

Cloud Engineering student at ESPRIT (graduating 2027) with three DevOps and cloud internships, on private (OpenStack) and public (AWS, Azure) clouds. Builds and automates infrastructure end to end: infrastructure as code, CI/CD pipelines, Kubernetes, monitoring and security.

Technical Skills

Cloud Platforms: OpenStack, AWS, Azure
Infrastructure as Code: Terraform, Ansible, Pulumi
CI/CD: Jenkins, GitLab CI/CD, GitHub Actions, Zuul, Argo CD
Containerization: Docker, Docker Compose, Kubernetes, Helm
Security: Falco, Kyverno, Trivy, Cilium
Monitoring: Prometheus, Grafana, Alertmanager
Systems & Languages: Linux, Python, Bash/Shell, YAML, FastAPI
Version Control: Git, GitHub, GitLab

Professional Experience & Projects

FelCloud — Remote
Cloud Infrastructure & DevOps Intern — *Summer 2026*

- Deployed a private **OpenStack** infrastructure with **Pulumi** (IaC): 10 VMs, 76 resources, dedicated network and SNAT router.
- Isolated services by role using a bastion-host architecture, 6 security groups and 2 anti-affinity groups.
- Optimized the **Zuul/GitLab** CI/CD pipeline with **pytest-xdist**: test time reduced from 65 s to 36 s.

3LM Solution — Remote
DevOps Intern — *Summer 2026*

- Containerized a full-stack application (**FastAPI, React, MariaDB**) with **Docker/Docker Compose**.
- Automated security scans (**Trivy, Gitleaks, Bandit**) in a **GitHub Actions** CI pipeline.
- Configured monitoring (**Prometheus, Grafana**): alerts on availability, 5xx errors and p95 latency.

ESPRIT · KubeAIOps Platform — Remote
DevOps/MLOps Intern — *Summer 2026*

- Developed a **FastAPI** API for **Kubernetes** capacity recommendation based on traffic forecasts and CPU utilization.
- Deployed a reproducible Kubernetes environment via **Helm** with **Kind**, monitoring with **Prometheus/Grafana/Alertmanager**.
- Built a complete **GitLab CI/CD** pipeline: tests, vulnerability scan, image build/push, load tests (**k6**).

Cloud Portfolio on AWS — chaabinourelhouda.com
Personal Project

- Deployed my portfolio (React SPA) on **AWS** with **Terraform**: private **S3** origin behind **CloudFront** (Origin Access Control), **ACM** TLS certificate and **Route 53** custom domain.
- Built a **GitHub Actions** CD pipeline authenticating through **OIDC** (no stored keys) with a least-privilege **IAM** role; lint, tests and build gate every deployment.
- Added a **CloudFront Function** for SPA routing, security headers (**CSP, HSTS**) and cache policies; remote Terraform state with **S3-native locking** and an **AWS Budgets** alert.

OpenStack Cloud Infrastructure with AI
Academic Project

- Automated **OpenStack** deployment with **Terraform** and **Ansible** in a hybrid infrastructure (backend OpenStack, frontend **Azure**), with anomaly detection and AI-based automatic scaling.
- Developed a full-stack B2B platform (**Angular, Spring Boot**) containerized with **Docker** and orchestrated via **Kubernetes**.
- Integrated **Azure Copilot** for an intelligent **Kubernetes** cluster, queryable in natural language about its status and resources.

K8s AutoGuard
Personal Project

- Combined runtime detection (**Falco/eBPF**), admission policies (**Kyverno**) and image scanning (**Trivy**) on **Kubernetes**.
- Automated a remediation pipeline (dry-run) triggered by **Falco** alerts, with ML classification and **Prometheus/Grafana** observability.

Education

ESPRIT — Tunis, 2024 - 2027
Engineering Cycle, specializing in Cloud Engineering

IPEIB — Bizerte, 2022 - 2024
Preparatory Classes, Mathematics-Physics (MP)

Languages

French: C1 · English: C1 · Arabic: Native

Activities

Member, JCI (Junior Chamber International) · Former member, IEEE ESPRIT Student Branch
